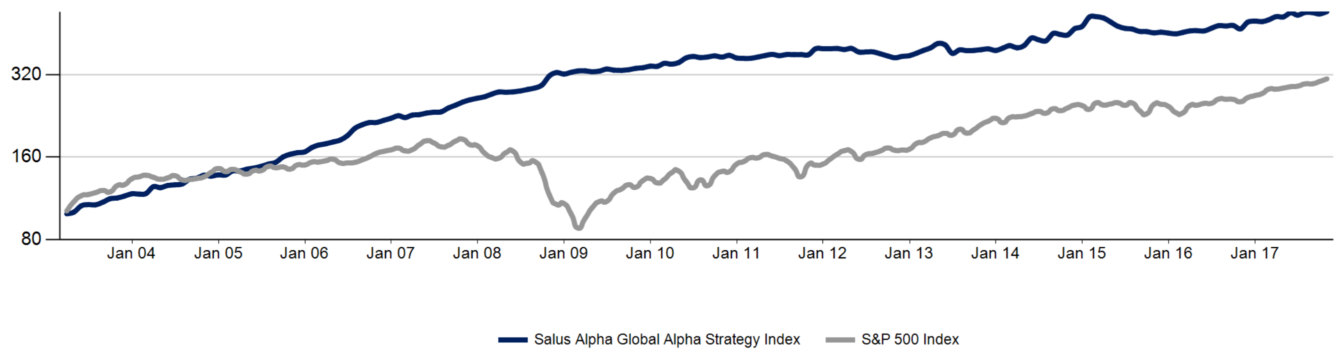
Salus Alpha GAX

31 October 2017

Trading Strategy Description

The Global Alpha Strategy trades futures, options and spreads on Equity indices, FX, Volatilty and Fixed income. A proprietary portfolio optimization engine is used to compute an optimal portfolio with predefined risk and return characteristics. The optimizer is targeting pure Alpha by focusing on the tail of the drawdown distribution. Strategies implemented include e.g spread trading of large cap vs. small cap, emerging markets vs. developed markets, value vs growth, option spreads, fixed income vs. equities, etc. The strategy is fully systematic and market neutral. Risk imbalances are neutralised by re-optimizing the book.

Trading Strategy Returns



The Salus Alpha Global Alpha Strategy outperformed the S&P 500 Index in 95% of the negative months since March 2003.
